**DETAILED ACTION**

1. Applicant's election with traverse of Group I, claims 1-7 in Paper No. 6, filed 23 April 2002 is acknowledged. The traversal is on the ground(s) that there is no burden on the office. This is not found persuasive because a full search of all the claims was not needed to examine the elected claims.

The requirement is still deemed proper and is therefore made FINAL.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Takeuchi et al. (U.S. 5,733,499).

Takeuchi et al. teaches a surface roughness of a ceramic sheet of less than .2 microns, the ceramic may be made of partially stabilized zirconia, a transition metal oxide may be

used as a sintering aide and the sheet may be used as a fuel cell element (col. 4, lines 5-30, col. 6, lines 10-20 and col. 6, lines 55-65). The instant invention claims a ceramic sheet with a burr height and dimple height less than 100 microns. It would have been obvious to one of ordinary skill in the art that a surface roughness of less than .2 microns would limit burr and dimple heights to less than 100 microns because of the teachings of Takeuchi et al. that low surface defects are desired (col. 1, lines 25-30).

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to William P. Watkins III whose telephone number is 703-308-2420.
